Data Dictionary - Merged Data Table | CRA Analytics Data Tables

Board of Governors of the Federal Reserve System

This data dictionary provides descriptions of variables in the **Merged Data Table**, including possible values for the variables. This document is accompanied by the *Data Dictionary Guide*, which explains the data dictionary framework and the naming convention. For detailed descriptions and sources of the data tables, the users can reference the *User Guide*.

The following details about the Merged Data Table are also available in the Data Dictionary Guide:

- Merged Data Table is organized at the *exam period, Assessment Area (AA), and bank level*; each row is uniquely identified by a combination of exam period (*…eval_period_begin* and *…eval_period_end*), AA (*assessment_area*), and bank (*id_rssd*).
- "p" denotes that the loan data were manually collected from the performance evaluations (PEs) and not reported directly to the Federal Financial Institutions Examination Council (FFIEC). The data are from banks that do not report CRA data (i.e., small banks), but may or may not report Home Mortgage Disclosure Act (HMDA) data. All "p" variables are at the *individual bank level*. All other loan data within the Merged Data Table come from the Retail Loan Table.
- "A" denotes an aggregate variable, which includes all lenders at the *AA level*, e.g., AH_bL1 is the count of HMDA loans by low- and moderate-income (LMI) borrowers at the AA for all lenders. It should be emphasized that the same variables name may exist in the Retail Loan Table, but they are aggregated at different levels.
- All other variables not marked "A" are at the *exam period and individual bank level*.

The variable order of the data dictionary follows the column order of the table. Users are encouraged to use the electronic version of the data dictionary to easily search for specific variables.

table	variable	definition	data type
merged_data_tbl	exam_year	Year of the Exam Start Date	float
merged_data_tbl	exam_proc	Type of CRA Exam, either Large Bank, Intermediate Small Bank or Small Bank.	varchar
