First Quarter 2000*

Flow of Funds Summary Statistics First Quarter 2000

Growth of domestic nonfinancial debt slowed to a 5-1/2 percent annual rate in the first quarter of 2000, owing to a resumption of large paydowns in federal debt after a pause in the fourth quarter. Since its peak in early 1998, federal debt held by the public has dropped about 4-1/2 percent, or \$177 billion.

Meanwhile, household and business borrowing remained brisk. In the first quarter, household debt rose at a 7-3/4 percent pace, somewhat slower than in recent quarters as home mortgage borrowing decreased a bit. Business debt expanded at a 10-1/2 percent annual rate in the first quarter, as firms tapped all major sources of credit in volume. Growth of state and local government

debt, at a 1-1/4 percent annual rate of increase, remained subdued.

The level of domestic nonfinancial debt outstanding was \$17.7 trillion at the end of the first quarter. Debt of nonfederal sectors was \$14.1 trillion, and federal debt was \$3.6 trillion.

Figures for the growth and level of debt are found in tables D.1 through D.3. Tables that show financial flows, amounts outstanding, and selected sector balance sheets are included in the remaining pages of this release.

Flow of Funds Accounts, First Quarter 2000

An updated version of the *Guide to the Flow of Funds Accounts* has been published by the Federal Reserve Board to replace the 1993 edition. The 1,200-page *Guide*, in two volumes, explains in detail how the U.S. financial accounts are prepared and the principles underlying the accounts. The *Guide* can be purchased for \$20.00 from the Board's Publications Services at the address shown on the next page; Publications Services accepts orders accompanied by checks as well as credit card orders. The Internet site for this release at the location shown on the next page contains a link to an order form for the *Guide* that can be mailed or faxed to Publications Services.

This publication presents the flow of funds accounts for 2000:Q1.

Table changes. With this release, additional detail is being added to the flow of funds accounts.

1. Figures for home equity loans, a component of home mortgages, are now provided on lines 24 through 29 in tables F.218 and L.218. Home equity loans include both the value of home equity lines of credit taken down and home equity loans secured by junior liens. The estimates are based on source data from lenders, each of which is shown separately. Aside from relatively minor revisions the data are consistent with estimates published earlier in *Federal Reserve Bulletin* articles in 1994 and 1998. The quarterly data for home equity loans are available from 1990:Q4 for levels and 1991:Q1 for flows.

2. Balance sheet data for households (B.100) and nonfarm nonfinancial corporations (B.102) will now be published at a quarterly frequency. The quarterly estimates combine previously published figures for financial assets and liabilities shown in tables L.100 and L.102, with estimates for tangible assets. Estimates are available for 1952:Q1 onward and can be downloaded via the Internet site.

Data revisions and other changes. The statistics shown in these tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods. The revisions include the following:

3. Data for investment and depreciation flows for all sectors have been revised as a result of the release of revised annual estimates for fixed reproducible tangible

wealth by the Bureau of Economic Analysis of the Department of Commerce (BEA). Saving and investment flows for sectors are flow of funds allocations of totals from the national income and product accounts (NIPA) that reflect the distribution of flows in the tangible wealth data.

4. Assets of the nonfarm nonfinancial corporate business sector (tables F.102 and L.102) were revised from 1997:Q1 onward to reflect new data from the Internal Revenue Service (IRS) *Statistics of Income* (SOI) for 1997.

5. In the nonfarm noncorporate business sector (tables F.103 and L.103), data have been revised for 1997:Q1 onward, owing to benchmark statistics available from the IRS/SOI for 1997.

6. Assets of the state and local governments sector (tables F.105 and L.105) were revised from 1998:Q3 onward to reflect data from the comprehensive annual financial reports of state and local governments for 1999:Q2.

Explanatory notes for tables D.1, D.2, and D.3.

Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, federally related mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

Relation of Flows to Outstandings. Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the flow of funds accounts are related to the flows in the following way:

Outstanding_t = Outstanding_{t-1} + Flow_t + Discontinuity_t
 where “t” is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

Percentage change_t = (Flow_t / Outstanding_{t-1}) * 100

Preliminary Estimates. Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter’s data were compiled is provided in a table following this introduction. The distinction between “available” data and “missing” data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

Margins of Uncertainty. Flow of funds statistics are subject to uncertainties resulting from measurement

errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of “discrepancies” for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

Availability of Data. Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication—the Z.1 release—is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.federalreserve.gov/releases/Z1>

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are files for quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, and debt (tables D.1, D.2, and D.3). There is a separate file for monthly data from January 1955 onward for the debt aggregate published in the Board's H.6 statistical release, “Money Stock and Debt Measures.”

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 33). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.

(1) Estimates of equity shares (lines 7 through 12) could differ from other sources owing to alternative definitions of ownership of equity by households.

In this table, line 11 includes equities in defined contribution plans only; assets in defined benefit plans are included in 'other assets' (line 13).

Prior to 1985, all pension assets are assumed to have been in defined benefit plans.
