Flow of Funds Summary Statistics Second Quarter 2000

Growth of domestic nonfinancial debt in the second quarter remained steady at a 5-1/2 percent annual rate as somewhat faster growth in household and business debt was offset by a larger paydown in federal government debt.

Federal debt fell at an 11-1/2 percent annual rate in the second quarter, the largest quarterly decline on record. From its peak in early 1998, federal debt held by the public has dropped \$367 billion, or around 9-1/2 percent.

Household debt strengthened to a 9-1/2 percent rate in the second quarter, at the high end of the growth rates recorded in the past couple of years. Home mortgage borrowing was up sharply, and growth of consumer credit also was brisk. Businesses stepped up their borrowing last quarter, and debt of nonfinancial firms accelerated to a 12 percent rate.

Corporate borrowing was boosted by a further large increase in capital spending relative to cash flow and by a substantial rise in retirements of equity. State and local government debt growth edged up to a still-modest 2 percent rate in the second quarter; net borrowing by this sector has been held down by a dearth of advance-refunding issues and bulging tax receipts, as well as by large retirements.

The level of domestic nonfinancial debt outstanding was \$17.9 trillion at the end of the second quarter. Debt of nonfederal sectors was \$14.4 trillion, and federal debt was \$3.5 trillion.

Figures for the growth and level of debt are found in tables D.1 through D.3. Tables that show financial flows, amounts outstanding, and selected sector balance sheets are included in the remaining pages of this release.

Flow of Funds Accounts, Second Quarter 2000

An updated version of the *Guide to the Flow of Funds Accounts* has been published by the Federal Reserve Board to replace the 1993 edition. The 1,200-page *Guide*, in two volumes, explains in detail how the U.S. financial accounts are prepared and the principles underlying the accounts. The *Guide* can be purchased for \$20.00 from the Board's Publications Services at the address shown on the next page; Publications Services accepts orders accompanied by checks as well as credit card orders. The Internet site for this release at the location shown on the next page contains a link to an order form for the *Guide* that can be mailed or faxed to Publications Services.

This publication presents the flow of funds accounts for 2000:Q2.

Data revisions and other changes. The statistics shown in these tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods. The revisions include the following:

1. Seasonal factors for quarterly financial flows have been recalculated for the period from 1990:Q1 onward. The factors were generated using the Statistics Canada X-11-ARIMA/88 seasonal adjustment program.

2. Revisions to the rest of the world sector (tables F.107 and L.107) reflect new estimates of the balance of payments from the Department of Commerce for the period 1982-1999. The revisions are detailed in the July 2000 *Survey of Current Business*. Among other information, the revisions reflect final results from the benchmark survey conducted by the Department of the Treasury and the Federal Reserve System of the level of U.S. portfolio investment in long-term foreign securities as of the end of 1997.

3. In the private pension funds sector (tables F.119 and L.119), data have been revised to reflect figures from the U.S. Internal Revenue Service/Department of Labor/Pension Benefit Guaranty Corporation Form 5500 filed for plan year 1996. The allocation of assets within the private pension funds sector has also been revised from 1988 forward based on newly available data for assets held in pooled accounts (such as master trusts and common and collective trusts) and improved methods for allocating assets in small plans (5500C filers).

4. Mortgages held by government-sponsored enterprises (tables F.124 and L.124) have been revised from 1997:Q4 forward to reflect the addition of mortgages held by Federal Home Loan Banks. The mortgages held are primarily single-family loans.

5. The statistics in this publication reflect the annual revisions to the national income and product accounts for 1997 forward released by the Department of Commerce on July 28, 2000, and subsequent information for 2000:Q2 released on August 25, 2000. The August 2000 issue of the *Survey of Current Business* details the major features of the annual revision of the national income and product accounts.

Explanatory notes for tables D.1, D.2, and D.3.

Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, federally related mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

Relation of Flows to Outstandings. Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the flow of funds accounts are related to the flows in the following way:

Outstanding_t = Outstanding_{t-1} + Flow_t + Discontinuity_t
 where “t” is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

Percentage change_t = (Flow_t / Outstanding_{t-1}) * 100

Preliminary Estimates. Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter’s data were compiled is provided in a table following this introduction. The distinction between “available” data and “missing” data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

Margins of Uncertainty. Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be

quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of “discrepancies” for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

Availability of Data. Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication—the Z.1 release—is available from the Board’s Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.federalreserve.gov/releases/Z1>

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are files for quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, and debt (tables D.1, D.2, and D.3). There is a separate file for monthly data from January 1955 onward for the debt aggregate published in the Board’s H.6 statistical release, “Money Stock and Debt Measures.”

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 33). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.

(1) Estimates of equity shares (lines 7 through 12) could differ from other sources owing to alternative definitions of ownership of equity by households.

In this table, line 11 includes equities in defined contribution plans only; assets in defined benefit plans are included in 'other assets' (line 13).

Prior to 1985, all pension assets are assumed to have been in defined benefit plans.
