Re: **Credit Risk Retention; Joint Further Notice of Proposed Rulemaking**
SEC (File No. S7-14-11); FDIC (RIN 3064-AD74); OCC (Docket Number OCC-2013-0010); FRB (Docket Number R-1411); FHFA (RIN 2590-AA43); HUD (RIN 2501-AD53)

Ladies and Gentlemen:

Resource America, Inc. (NASDAQ: REXI) is pleased to submit these comments in response to the joint Further Notice of Proposed Rulemaking, 78 Fed. Reg. 57928 (Sept. 20, 2013; originally released Aug. 28, 2013) ("FNPRM"), concerning risk retention and the implementation of Section 941 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act").

I. Overview.

Resource America submits these comments to address how the agencies' proposed regulations would adversely affect CLOs and the commercial loan market, how features of CLOs already provide extensive and adequate incentives that align CLO managers' interests with those of CLO investors, and how, if regulation is deemed necessary, other alternatives would protect investors without causing extensive harm to CLOs, credit markets, and competition.

In particular, Resource America is very concerned that the regulations proposed by the agencies would significantly and adversely affect the formation and continued operation of CLOs, along with the support they provide to the commercial loan market. Open Market CLOs present none of the risks presented by the originate-to-distribute model that Section 941 was designed to address, and a range of incentives ensure that their managers act consistently with investors' interests. CLO performance during the recent financial crisis confirms the robustness of these incentives, as does the subsequent resurgence of the CLO market that demonstrates investors' confidence that their interests are fully protected. For these reasons, additional regulation requiring CLO managers to retain more credit risk would produce no benefits and would substantially harm competition and the public. This result would be especially unfortunate because various alternatives are available to the agencies that would far better advance the public interest.

II. Our Experience with CLOs and Commercial Loan Markets.

Resource America is a specialized asset management company that uses industry specific expertise to generate and administer investment opportunities for its own account and for outside investors in the commercial finance, financial fund management sectors, and real estate sectors.

Resource America has been an active participant in the CLO and loan syndication market as both a manager and investor for nearly ten years. Resource America formed CVC Credit Partners, LLC ("CVC Credit"), formerly known as Apidos Capital Management, LLC, in 2005 as a wholly owned subsidiary focused on management of nineteen CLOs and other investment products focused on the syndicated loan market. Since 2012, CVC Credit has been the U.S. subsidiary of CVC Credit Partners LP, the credit management joint venture between Resource America and CVC Capital Partners SICAV-FIS, S.A. CVC Credit is a registered investment adviser with approximately $9.5 billion in loan assets under management.

Resource America also serves as external manager to Resource Capital Corp. (NYSE: RSO), a commercial real estate specialty finance company that qualifies as a real estate investment trust, or REIT, for federal income tax purposes. Resource Capital Corp.'s investment strategy includes investments in senior secured corporate loans as well as debt and equity tranches of CLOs. Resource Capital Corp. has a market capitalization of approximately $865 million and an investment portfolio of approximately $2.4 billion.

Resource America's market role and experience provides us with a clear understanding of the current CLO market, CLOs' performance during and since the recent financial crisis, and the likely adverse effects of the proposed regulations.

III. The Proposed Rules Would Adversely Affect Us, Other Open Market CLO

Managers, Commercial Lending, Borrowers, and Investors.

Our experience in the CLO market leaves us with no doubt that the proposed rules would significantly and adversely affect the formation and scope of future CLOs.

The requirement that Open Market CLO managers retain five percent of the face value of the CLO's assets – in addition to the very significant credit risks already assumed through the CLO managers' compensation structure – would very adversely affect CLO formation. Many CLO managers, including us, are too small to secure or devote funds of that magnitude for positions that cannot be disposed or hedged – no matter what the competing business opportunities or demands. For other CLO managers that might have the financial capacity to hold such a significant position, doing so would require a restructuring of current business models and anticipated returns – making a once viable business much less profitable, requiring that managers instead devote those funds to other, more productive uses.

The proposed risk retention requirements would result in a significant contraction in the CVC Credit business. If enacted, these requirements would have a significant impact on CVC Credit's ability to enter into management agreements for new issue CLOs due to the exorbitant amount of capital needed to retain 5% of the notional value of each CLO. This would likely result in a substantial reduction in the number of management agreements entered into by CVC Credit and a corresponding reduction in the number people employed by CVC Credit to assist in the management of these portfolios.

Resource America is also contemplating an expansion of its investment team focused on middle market loans. This expansion is, in no small part, predicated on the liquidity that CLOs provide to the loan market. Since CLOs currently represent the second largest source of term loans to American business after banks they play a vital role in providing liquidity to the loan market. Absent this liquidity, Resource America would be unlikely to consider investing in new businesses focused on a rapidly shrinking market.

Our market assessment is that the proposed rules would cause a dramatic decrease in the size and functioning of the CLO market as a whole. We are aware of the survey of CLO managers that indicated that the decrease in CLO offerings is anticipated to be in the order of 75 percent.[1] We generally agree with that assessment, and are concerned that it may well be too optimistic. We are also aware of the broad range of comments and record evidence that establish that the proposed rules would adversely affect the formation and continued operation of the CLO market.[2] We agree with the factors identified in those comments and assess that those factors will contribute to the magnitude of the decrease in CLO formation identified in the LSTA survey. Indeed, the agencies themselves anticipate these adverse effects on CLOs and

competition.[3]

Our experience also indicates that this resulting decrease in the formation and scope of CLOs would have profoundly negative implications for the loan market. CLOs are vital to supporting the loan syndication process and to providing liquidity necessary to the efficient functioning of many of the most important sectors of the commercial loan market. If the proposed rules were implemented and adversely affected CLOs in the manner we anticipate, then borrower costs would increase, many borrowers would be shut out of the loan market altogether, the secondary market would become considerably less liquid, and many investors would be denied a valuable and attractive set of investment opportunities. Competition in the provision of loans and investment product would decrease. Those adverse results pose broad risks to the efficient functioning of the loan markets, and the adverse effects on borrowers would have further adverse effects on production efficiency, innovation, employment, and consumer prices.

IV. Additional Regulation of Open Market CLOs Is Inappropriate and Unnecessary.

A. Commercial and Regulatory Factors Already Align the Interests of Open Market CLO Managers and CLO Investors.

The proposed credit risk retention rules fail to account for the very significant factors that already ensure that Open Market CLO managers select and manage CLO assets prudently and in investors' interests. Open Market CLO managers do not employ the "originate-to-distribute" model of securitization that contributed to the financial crisis and prompted Congress to enact Section 941. The nature of Open Market CLOs, and their role in the loan market and in the provision of securities to investors, ensures that they operate independently and that managers' interests are completely aligned with CLO investors' interests. This alignment of interests, and related lack of any need for risk retention regulation to further align those interests, arises from the following characteristics of Open Market CLOs.

First, Open Market CLO managers act independently of loan originators and exercise independent judgment in selecting among loans originated by unaffiliated entities. They are free from potential conflicts and disincentives related to the originate-to-distribute model and attract investors based in large measure on this independence and the resulting quality of asset selection. This provides a strong incentive for continued selection of higher-quality assets.

Second, CLO managers bear significant risk through their deferred, contingent compensation structure that has been shaped and ratified by the market. CLO managers receive their primary sources of compensation only if they deliver for their investors: they are compensated principally as the most subordinated CLO investors secure their returns, and a large component of their compensation is received only after the CLO has performed well over most of its life for all classes of investors, including those whose securities are most at risk. CLO managers' compensation structure places a premium on careful selection and management of assets, aligning their interests with investors' interests. Indeed, investors and the competitive process have shaped and ratified the compensation structure. In this very fundamental sense,

[3] *See* 78 Fed. Reg. 57962.

CLO managers already have skin in the game – and creating that interest, which already exists for CLOs, is the entire point of the proposed regulations. The agencies have recognized and acknowledged this alignment of investor and manager interests created by the compensation structure.[4]

Third, almost all Open Market CLO managers are registered investment advisors, with associated fiduciary duties – and potential liabilities – to their investors. This status triggers a separate and quite effective regulatory and supervisory regime that also provides incentives for careful selection and management of assets.

Fourth, the assets selected by Open Market CLO managers have been evaluated through multiple layers of underwriting and market decisions. These include the loan arrangers' decisions in underwriting the loans, the market's evaluation in pricing and syndicating the loans, and the CLO manager's decisions in selecting the loans for the CLO to purchase. Often, the assessments reflected in secondary market pricing also contribute to the selection of high-quality assets.

Fifth, CLO managers actively manage their loan portfolios for much of the life of a CLO. This active role is unlike that for many other ABSs, and further protects investors. CLO managers can limit losses and secure additional gains based on the additional performance information provided for the particular loans and by the secondary market. In this management role, the CLO manager exercises independent judgment and has every incentive to act only in the best interest of CLO investors.

Finally, CLO managers select – and CLO investors demand – commercial loans with features that protect investors. Prominently, CLO managers select senior secured loans. This often ensures complete or very substantial recovery and loss protection even in the event of default, and is an important reason why CLOs protected investors so well during the recent financial crisis.

B. CLO Performance Confirms the Adequacy of Existing Incentives and Investor Protections.

The historically strong performance of CLOs demonstrates the concrete and practical results of these unique features of CLOs. Despite the massive financial crisis that resulted in widespread losses among other asset classes, CLOs performed exceptionally well. Although CLOs experienced ratings downgrades, the vast majority of CLO notes that were originally rated AAA retained ratings of AA or higher during the crisis.[5] And most significantly, CLOs experienced *de minimis* events of default and even lower rates of financial loss.[6] The Board of Governors of the Federal Reserve has acknowledged the low default rate among CLOs during

[5] *See* LSTA Letter Comment, August 1, 2011 at 7.

[6] *Id.*

the financial crisis, which it attributed in part to the incentive alignment mechanisms inherent to CLOs.[7]

We are aware of numerous comments submitted in this rulemaking that confirm the strong performance of CLOs during the financial crisis.[8] Our experience as direct participants in the industry accords with these views. We believe that this record of performance demonstrates that the existing safeguards and incentive alignments in the CLO industry more than adequately meet the goals of Section 941.

C. In Light of These Incentives and Performance History, Additional Regulation Would Provide No Public Interest Benefits.

Because existing commercial and regulatory incentives fully align the interests of CLO managers and CLO investors, additional risk retention requirements would not redress any market failure or further align those interests. Because Open Market CLO managers select assets independently of loan originators, and do not operate as part of an "originate-to-distribute" model, the operations of Open Market CLOs present none of the risks to investors that Section 941 was designed to address. As set out above, the recent performance of CLOs confirms that no additional risk retention requirements are needed.

We agree with other commenters that have analyzed the language and purpose of Section 941 and have shown that Congress did not intend to impose risk retention requirements on Open Market CLO managers.[9] Presumably, Congress did not intend to do so precisely because Open Market CLOs present none of the problems Section 941 was designed to fix. Because Open Market CLO managers facilitate the CLOs' purchase of assets, they do not directly or indirectly sell or transfer assets to the CLO – and are thus not within the scope of the statutory definition of "sponsor" as the agencies incorrectly assert.[10]

[10] *Compare* 78 Fed. Reg. 57962.

We also agree with commenters that, in light of the high costs and absence of benefits arising from imposing credit risk retention requirements on Open Market CLO managers, the agencies should exercise their statutory powers to exempt those managers from the credit risk retention requirements – assuming that those requirements even apply.[11] If the agencies believe that certain types of CLOs pose a risk to investors, or that further restrictions on which CLO managers can qualify for an exemption are appropriate, a commercially sensible set of "ring-fencing" qualifications has been proposed in the comments.[12]

V. Other Regulatory Alternatives Would Be Preferable to the Agencies' Proposed Approach.

Although we believe that the intended scope of Section 941 and the facts surrounding the operation of CLOs indicate that it would be a significant mistake to impose credit risk retention requirements on Open Market CLOs, alternative regulatory approaches would meet the agencies' objectives while causing far less harm to CLOs and commercial loan markets.

For example, the LSTA has proposed that CLO managers could retain credit risk, consistent with the statutory requirements, by holding a set of securities that embody the compensation structure currently endorsed by the market and purchasing an interest in the CLO's equity.[13] Both the securities and the equity interest would confirm the alignment of interests between the CLO manager and the CLO investors. The cash outlay for the proposed equity interest would be manageable for most CLO managers. We endorse that approach as far preferable to the agencies' proposed regulations. We also believe that the standard CLO compensation structure aligns our interests with those of our investors, and that the proposed purchase of an equity interest is workable and should remove any doubt that appropriate incentives apply to CLO managers' asset selection decisions.

Similarly, we endorse proposals that would reduce any risk retention requirement on a *pro rata* basis to the extent that a CLO's assets are comprised of higher-quality loans. A material portion of the loans that we and other CLO managers select are higher-quality loans under any commercially reasonable definition, present very limited risks to investors, and should be taken into account in setting the amount of any credit risk that the CLO manager must retain.

In addition, we are aware that various commenters are proposing that parties associated with the CLO manager be able to retain credit risk in a manner that would satisfy Section 941's requirements. We endorse those proposals. Often, key investors or market participants work

with a CLO manager in initiating the CLO and may play an advisory or other role in the selection of CLO assets. Having such parties, rather than the CLO manager, retain credit risk makes considerable sense in terms of the agencies' objectives and the effect on the CLO market (the agencies' recently proposed alternative related to loan arrangers' holding risk similarly relies on a third party's retention of credit risk). Because parties coordinating with the CLO manager may contribute to the selection of assets, having them retain credit risk advances the agencies' goal of improving incentives related to asset selection. Such parties often have investment, rather than investment management, as their core business, making it more appropriate that they retain the requisite interest. In addition, they may do so without causing the disincentives and adverse impacts that arise when the CLO manager is required to retain a comparable economic interest.
