## Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the bestpreserved paper copies, scanning those copies, ${ }^{1}$ and then making the scanned versions text-searchable. ${ }^{2}$ Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

[^0]MONEY MARKET AND RESERVE RELATIONSHLPS

## Recent developments

(1) Interest rates have continued to move higher in general since the last meeting of the Committee, although some yields receded from their most recent highs as a result of peace hopes. The 3-month Treasury bill rate for the most part fluctuated near the upper end of the projected 5.10-5.40 per cent range. The growth of major deposit and reserve aggregates has also been near, or slightly above, the upper end of the ranges specified in the last Blue book. Growth in the bank credit proxy in October is now estimated at a 12 per cent annual rate, on average, a shade below the upper end of the range specified earlier, after allowance is made for the smaller-than-assumed October tax bill financing. (Inclusion of Euro-dollar borrowings of banks would reduce the proxy by one-half percentage point, less than previously assumed.)
(2) The Treasury on Wednesday offered two issues-an 18 -month and a 6 -year note--in a "rights" exchange for the maturing Noveniver axr December coupon issues, of which $\$ 5.6$ billion are held by the public. The short note has a $5 \mathbf{5 / 8}$ per cent coupon and is priced to yield 5.73 per cent, while the longer note is a re-opening at par cf an outstañoig

p - Preliminary. n.a. Not available. e - Estimated.
4/ Average of total number of days in period. Previous data based on number of trading days in period.
is5ue with a 5-3/4 per cent coupon. Books will be open October 28-30, with settlement on November 15. The market reacted with some surprise to inclusion of a 6-year note in the offering in view of the fair-sized inventory of 5-5/8's of August '74, which were issued last August, still in dealer hands. As of Friday, market reaction to the whole package appeared satisfactory, although many investors are likely to delay decision, particularly with respect to the longer term note, until the last minute in hopes that the status of peace negotiations will become clearer.
(3) Day-to-day money market rates have shown little net change during the interval since the last meeting. The Federal funds rate has averaged close to $5-7 / 8$ per cent. In the earlier part of the period funds traded frequently around 6 per cent, while later the rate dropped, often to $5-3 / 4$ per cent, as there was a sizeable reduction in the basic deficits of banks in the central money market (although periods of very temporary tightness or ease have been recurring around the end of statement weeks). The rate for new loans to dealers in New York has centered around 6-1/2 per cent, although both higher and lower rates have not been uncommon.
(4) Member bank borrowing has averaged $\$ 425$ million during the last 2 full statement weeks since the Committee meeting, despite a sharp drop in borrowings in the most recent week. Excess reserves have averaged $\$ 160$ million, down $\$ 100$ million from the preceding four weeks. Over the whole period since the new reserve procedures have been in effect, excess reserves have averaged about 30 per cent lower than they
were in the two months before the change. The bulk of the decline has been at reserve city banks, which have begun actively to utilize the reserve carry-over provision. Thus far, a bi-weekly pattern of excess reserve fluctuations has developed, as banks in one week have accumulated excess reserves and have utilized them by running reserve deficiencies in the succeeding week.
(5) Growth in the bank credit promy in October reflected relatively strong loan demands from businesses and reduced though continued fairly sizable investments in municipal securities. These asset additions have been financed by somewhat larger inflows of time deposits and private demand deposits than projected in the previous Blue book. However, these inflows have been partly offset by lesser availability of U.S. Government deposits than projected, while there was a small net drain of funds, on average, through Euro-dollar deposits.
(6) The growth in total time and savings deposits in October on average is now projected at a 17 per cent annual rate, mainly because of larger than anticipated rise in negotiable CD's outstanding. There was a spurt in CD issues by major money market banks in late September and early October, when Euro-dollar borrowings were dropping and when business loan expansion was quite strong. Money supply growth is estimated at around 7 per cent annual rate for the month.
(7) Comparative average annual rates of change for major deposit and reserve aggregates for several recent periods are shown in the following table:

|  | $\begin{aligned} & \text { May '67- } \\ & \text { Nov. '67 } \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { Dec. } 167- \\ & \text { June } 68 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { July '68- } \\ & \text { Oct. '68p } \\ & \hline \end{aligned}$ |

[^1]
## Prospective Developments

(8) Demands for bank reserves--given current money market conditions and the economic outlook--are likely to remain on the strong side in the weeks ahead, though perhaps showing some tapering off from most recent experience. Banks are expected to continue to be active buyers of municipals at close to their October rate. Business
loan demand may remain fairly substantial as economic activity, though moderating, continues at a fairly rapid pace in the fourth quarter and inventory accumulation remains high. However, net cash raised by the Treasury, if any, is expected to be of less than seasonal proportions in the period ahead.
(9) We are assuming that banks will be called upon to help underwrite a $\$ 2.5$ billion Treasury tax bill financing in the last week of November, although the financing may be delayed until early December. This cash financing would recoup the attrition from the holders of November "rights" (assumed in our projections to be only around 10 per cent) and would provide the means for paying-off holders of the December "rights" who did not accept the current exchange offering (which could come to 50 per cent or so of the public holdings). The $\$ 2.5$ billion tax bill assumption also allows for about a $\$ 1$ billion of net new cash to be raised by the Treasury.
(10) The bank credit proxy in November is projected to rise In a 9-12 per cent, annual rate, range on average. This reflects large differences in within-month patterns. The proxy is projected to be at a much higher level in the last week of October than in the last week of September partly because banks credited tax and loan accounts on October 24 in payment for the tax bill financing just completed. The level of the proxy will show little change from the end of October to the end of November, although the average level for the month will be significantly above the average for October. About 1 percentage point
would be added to average growth in the proxy during the month if Euro-dollar borrowings remain, on average, at current levels.
(11) Because the next Treasury tax bill financing will not be before late November, most of its impact will be felt in December. Even so, growth in the bank credit proxy in December could be lower than in November since the amount of net new cash assumed to be raised by the Treasury is less than usual for this season of recent years.
(12) The bank credit projections for November assume maintenance of a Federal funds rate fluctuating around 5-7/8 per cent, new loan rates to dealers in New York centering around 6-1/2 per cent, and member bank borrowings in a $\$ 400-\$ 600$ million range. The recent large fluctuations in banks' excess reserves make it difficult to project the net reserve position of banks consistent with the above conditions. But assuming excess reserves fluctuate around the average of the past few weeks, net borrowed reserves could move within a $\$ 100$ to $\$ 400$ million range.
(13) During November, and into the first half of December, the bill rate usually rises for seasonal reasons in the order of 10 to 15 basis points, despite seasonal System reserve supplying operations. This rise could be intensified if it turns out that the Treasury does need any significant amounts of net new cash, if current hopes for peace negotiations are disappointed, or if further strong economic news is reported. On the other hand, a successful outcome to current peace
negotiations would likely be accompanied by downward pressures on both short- and long-term rates over the near-term. And a good market reception of the current "rights" offering could also increase demands for bills as holders of the maturing issues sell them in the market and re-invest the proceeds in bills. Given the uncertainties influencing market attitudes, the 3 -month bill rate might be in a 5.25 - 5.60 per cent range over the weeks ahead.
(14) In November, banks' time and savings deposits are expected to rise in a $12-14$ per cent, annual rate, range. Growth in outstanding $C D$ 's is likely to be slower than the unusually rapid October pace. Private demand deposits are expected to continue rising, and money supply may grow in a 7-9 per cent, annual rate, range. This projected growth mainly reflects continued transactions needs and credit demands, as only a small decline, on average, in U.S. Government deposits is anticipated.
(15) "Even keel" considerations appear to be involved over the greater part of the interval between this and the next meeting of the Committee on November 26. While the specification in paragraph (12) would be consistent with an "even keel" posture, it remains possible that a rise in the 3 -month bill rate toward the upper end of the range in paragraph (13) might be construed by the market as reflecting a shift in the attitude of the monetary authorities. However, if such a rise did not occur until toward the end of the period, it would be at a time when "even keel" considerations would be less constraining.

## MAJOR SOURCES AND USES OF RESERVES

## Retrospective and Prospective

(Dollar amounts in millions, based on weekly averages of daily figures)

1/ For retrospective details see $B-4$.
p - Preliminary.
2/ For factors included, see Table B-3.
3/ For required reserves by type of deposits, see Table B-2.
4/ See reverse side for explanation.
$\underline{5} /$ Includes increase in reserve requirements of $\$ 360$ million effective Jan. 11,1968 and $\$ 190$ million effective January $18,1978$.

1. Changes in Federal Reserve credit indicate reserves needed to offset projected changes in required reserves and factors affecting the supply of reserves.
2. Projected changes in currency outside banks reflect seasonal movements plus an allowance for growth of about $\$ 50$ million per week.
3. Projected effects of Treasury operations, included in "technical factors," reflect scheduled and assumed calls in current two weeks and maintenance of Treasury balances with Federal Reserve at $\$ 1.0$ billion thereafter.
4. Projected changes in required reserves assume the existing net reserve position of banks and the structure of interest rates in the market, as well as the current economic outlook. On the basis of these assumptions, projections reflect expected movements in bank credit and money in the period ahead, including the effects of such elements as the public's loan demand, repayments of previous loans, banks' investment preferences and willingness to supply loans, banks' desires and abilities to obtain time and savings deposits, and the Government's financing needs. The projections thus encompass normal seasonal developments, temporary bursts of loans demand and expected associated repayments not currently reflected by the seasonals, and whatever cyclical and growth demands for money and credit are expected in the projection period. Assumed Treasury financing operations include: \$0.4 billion, October 30; \$-0.4 billion, November 15; \$2.5 billion, November 27.

p - Preliminary.

[^0]:    ${ }^{1}$ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).
    ${ }^{2}$ A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

[^1]:    NOTE: Dates are inclusive p--preliminary estimates 1/ July-September only.

[^2]:    Reflects reserve requirement changes in July, September 1966, and March 1967.
    Includes increase in reserve requirements of $\$ 360$ million effective January 11,1968 and $\$ 190$ million effective January 18, 1968.
    p - Preliminary.
