## TEE DOMESTIC NONFINANCIAL ECONOMY

## Labor Market Developments

Total nonfarm payroll employment increased 284,000 in October, and the unemployment rate moved down 0.2 percentage point to 4.7 percent, its lowest level since October 1973.

In the payroll survey, nearly all of last month's employment gains were concentrated in the private sector; government employment rose only 2,000. Since July, private payrolls have increased 221,000 per month on average, similar to the 212,000 per month pace set in the first half of the year. By industry, factory payrolls jumped 54,000 last month--their largest gain during the current expansion. Within the service-producing sector, employment in the services industries rose 100,000 . led by sizable increases at computer services and engineering and management services establishments. ${ }^{1}$ Elsewhere, employment gains were generally in line with or above recent trends.

The average workweek of private production or nonsupervisory workers held steady at 34.5 hours, and aggregate weekly hours increased 0.2 percent. Hours growth in manufacturing was particularly strong in October. The average workweek for manufacturing production workers rose 0.2 hour to 42.0 hours, and aggregate weekly production worker hours rose 0.8 percent. ${ }^{2}$ In the service-producing sector, the workweek held about steady, and hours growth was considerably more moderate.

Average hourly earnings of production or nonsupervisory workers rose 0.5 percent last month, following a 0.3 percent rise in September. Wage increases over the past two months have been boosted by the September 1 rise in the minimum wage (from $\$ 4.75$ per hour to $\$ 5.15$ per hour). Both this year's minimum wage hike and the one that occurred on October 1,1996 , contributed to the pickup in the growth of average hourly earnings to 4 percent over the past twelve months; absent the most recent hike in the minimum wage, we believe average hourly earnings would have been up about 3-3/4 percent from their level a year ago.

Average Hourly Earnings*
welve-month percent change

* Production or nonsupervisory workers.

The household survey continues to point to tight labor markets. The drop in the aggregate unemployment rate was led by a 0.5 percentage point decline in the unemployment rate of women aged 25 and older; the unemployment rate for men aged 25 and older held steady, while the rate for teenagers--who account for only a small share of the labor force--dropped sharply. Household employment posted a 179,000 gain last month, with the increase concentrated largely among teenagers. The labor force participation rate held nearly steady, edging down 0.1 percentage point to 66.9 percent. Except for its bump up to 67.3 percent in March, the participation rate has fluctuated within a tenth or two of 67 percent for the past twelve months.

With this month's release, the BLS also announced that its preliminary estimate of next year's benchmark adjustment to the March 1997 employment count is 475,000 , or 0.4 percent of total payroll employment. In addition, the BLS reports that its biasadjustment factor--the adjustment to the sample-based estimates that is intended to capture employment growth at establishments that are underrepresented in the sample (including new establishments and smaller establishments)-is 155.000 for the fourth quarter. Whotesale Inventories

Excluding motor vehicles, the book value of wholesale inventories rose at a $\$ 32.9$ billion annual rate in September, after growing at a revised $\$ 25.5$ billion pace in August. Nonvehicle sales of merchant wholesalers rose 2 percent in September, and the inventory-sales ratio for wholesale trade excluding motor vehicles fell to 1.23 months-within the narrow range posted over the past year.

Most categories of nondurables posted small changes in September. However, stocks in the "other nondurable goods" category--which includes tobacco--continued to accumulate, increasing at a rate of $\$ 9.5$ billion. Nonetheless, the September increase was sharply lower than August when we suspect that wholesalers stocked up on tobacco products in advance of September's price increase. Among durables, wholesale inventories in the professional and commercial equipment and supplies category also contributed to the buildup, advancing $\$ 8.3$ billion after having fallen in the preceding two months. This strength is consistent with the continuing strong growth in demand for office and computing equipment. Other industries that registered noteworthy stock

```
increases were machinery ($8.0 billion) and electrical goods
($4.9 billion).
    The September wholesale inventory accumulation was
substantially above the BEA's assumption of $12.3 billion. If other
data come in as the BEA assumed, overall inventory investment in
1997:Q3 would be revised up about $7 billion, about twice what the
staff assumed in our Greembook estimate.
```

Note. Adjusted for breaks caused by reclassifications. Monthly levels are pro rata averages of weekly (Wednesday) levels. Quarterly levels (not shown) are simple averages of monthly levels. Annual levels (not shown) are levels for the fourth quarter. Growth rates shown are percentage changes in consecutive levels, annualized but not compounded.

1. Adjusted to remove effects of mark-to-market accounting rules (FIN 39 and FASB 115).
2. Includes securities of corporations, state and local governments, and foreign governments and any trading account assets that are not U.S. government securities.
3. Excludes interbank loans.
4. Includes an estimate of outstanding loans securitized by commercial banks.
5. Includes security loans, loans to farmers, state and local governments, and all others not elsewhere classified. Also includes lease financing receivables.
p Preliminary.

[^0]:    ${ }^{1}$ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).
    ${ }^{2}$ A two-step process was used. An advanced optimal character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

[^1]:    1. Although these two industries comprise only 4 percent of total employment, they have accounted for more than 10 percent of the jobs added in the past year.
    2. Using the seasonal factors developed by the FRB staff for use in estimating industrial production, aggregate factory hours rose 0.4 percent in October.
